Search strategy - Trademarks

Chosen search strategy: **Comprehensive**

**Description of accuracy**
The Comprehensive search algorithm is built with a statistical method, using more than 10,000 official cases where two marks have been found confusingly similar by a government official in the US and the EU.

This means that the Comprehensive search and watch reports covers all the usual search strategies applied in manual searching, such as:

- identical
- phonetic similarity
- orthographic similarity and misspellings
- prefix, infix and suffix variations
- vowel and consonant similarity
- plurals and stemming
- abbreviations and acronyms
- other similarities

The Comprehensive algorithm also applies unique "noise" reduction techniques. This results in a lower number of results without affecting the overall quality (reaching more than 99% of potential conflicts).

Statistical Risk Analysis - Trademarks

The ranking of results is based on a statistical analysis of more than 10,000 official cases of confusingly similar trademarks in the EU or the US. The four "Risk levels" indicate statistically where you will find potential conflicts.

**Level 1 - Very high risk.**
Of all conflicts, 20% have these types of similarities. This group of results typically stands for less than 1% of the total amount of results.

**Level 2 - High risk.**
Of all conflicts in Europe or the US, 40% have these types of similarities. This group of results typically stands for only 5% of the total amount of results.

**Level 3 - Medium risk.**
Of all conflicts in Europe or the US, 25% have these types of similarities. This group of results typically stand for 20% of the total amount of results.

**Level 4 - Low risk.**
Of all conflicts in Europe or the US, 15% have these types of similarities. This group of results typically stands for 75% of the total amount of results.
