Search strategy - Trademarks

Chosen search strategy: Comprehensive

Description of accuracy

The Comprehensive search algorithm is built with a statistical method, using more than 10.000 official cases where two marks have been found confusingly similar by a government official in the US and the EU.

This means that the Comprehensive search and watch reports covers all the usual search strategies applied in manual searching, such as:

- identical
- phonetic similarity
- orthographic similarity and misspellings
- prefix, infix and suffix variations
- vowel and consonant similarity
- plurals and stemming
- abbreviations and acronyms
- other similarities

The Comprehensive algorithm also applies unique "noise" reduction techniques. This results in a lower number of results without affecting the over all quality (reaching more than 99% of potential conflicts).

Statistical Risk Analysis - Trademarks

The ranking of results is based on a statistical analysis of more than 10.000 official cases of confusingly similar trademarks in the EU or the US.

The four "Risk levels" indicate statistically where you will find potential conflicts.

Level 1 - Very high risk.

Of all conflicts, 20% have these types of similarities. This group of results typically stands for less than 1% of the total amount of results.

Level 2 - High risk.

Of all conflicts in Europe or the US, 40% have these types of similarities. This group of results typically stands for only 5% of the total amount of results.

Level 3 - Medium risk.

Of all conflicts in Europe or the US, 25% have these types of similarities. This group of results typically stand for 20% of the total amount of results.

Level 4 - Low risk.

Of all conflicts in Europe or the US, 15% have these types of similarities. This group of results typically stands for 75% of the total amount of results.

Common law sources - Scope of search

An automated search, with the described limitations, has been done for the following common law sources:

US company names

Scope of search: A search among more than 20 million secretary of state business records from all US states and Washington DC.

Domain names

Scope of search: Identical and very similar results from more than 1000 TLD's.

Web search Beta

Scope of search: An automated web search where known biases as region and personal search history has been eliminated. The search combines the trademark name with important keywords provided during the order (or just the trademark name if no keywords were provided). The top 30 results are included.

Images

Scope of search: The same search settings as the Web search. The top 30 results are included.

Social media search Beta

Scope of search: A search of the use of the trademark name in the world's largest social networks: Facebook, LinkedIn, Twitter, Instagram, Google+ and Pinterest. The top 10 results from each social network are included.

Social names

Scope of search: A search if the trademark name is registered as a user name in any of 85 social networks.
